

## ABSTRACT

An organic electroluminescent display (1) including:  
an organic electroluminescent device (10), and a color  
5 converting member (20) including a shielding layer (23) and  
a shielding layer aperture region (24) including a color  
converting layer (22), edges (23-1) of the aperture region  
(24) being closer to the center of the aperture region (24)  
than edges (41-1) of an emission region (41) of the organic  
10 electroluminescent device (10).
